

delineation failure - figured out

Posted by chljl - 2009/03/19 03:00

I got delineation failure for no apparent reasons. I tried every solution I can find from this forum but didn't solve the problem. It seems many people have this problem too. Later on I accidentally turned off Threatfire, a malware protection software and surprisingly found out the problem disappeared righted away. I tested several times and this program really affects.

I believe there are other programs having the same conflict with AGWA (or ArcGIS).

Thanks for the tip. We don't have Threatfire installed here so I can't test this any further, but hopefully others will benefit from your discovery.

Thanks
Shea
